# Monyetla: Physical Sciences Grade 12 MOMENTUM AND IMPULSE

#### Summary

5. An object falls vertically onto another object that is moving horizontally below it:  $\sum p_i = \sum p_f$ 

$$\begin{split} m_1 v_{1i} + m_2 v_{2i} &= (m_1 + m_2) v_f \\ m_1 v_{1i} + m_2 (0) &= (m_1 + m_2) v_f \\ m_1 v_{1i} &= (m_1 + m_2) v_f \end{split}$$

#### POSSIBILITY 1:

 Two separate objects move towards each other and collide, after the collision they bounce off each other and move away.

Think of snooker balls colliding.

 $m_1 v_{1i} + m_2 v_{2i} = m_1 v_{1f} + m_2 v_{2f}$ 

#### POSSIBILITY 2:

- Two separate objects move towards each other and collide, after the collision they combine and move as one system.
- Think of cars colliding and sticking together.
- There can only be one velocity for objects that are joined. For this scenario it will be v<sub>f</sub>.

 $m_1 v_{1\,i} + m_2 v_{2\,i} = (m_1 + m_2) v_f$ 

#### POSSIBILITY 3:

- Where there are 2 objects that start as one (connected) system, after an explosion they move apart and are now two separate objects.
- Think of a trailer connected to a car.
- There can only be one velocity for objects that are joined. For this scenario it will be v<sub>i</sub>.

 $(m_1 + m_2)v_i = m_1v_{1f} + m_2v_{2f}$ 

#### Conservation of linear momentum

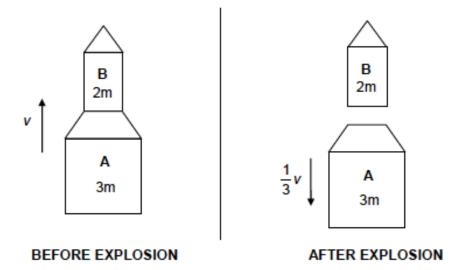

- Should be an Isolated system
- Isolated system is when the resultant (or net) external forces acting on the system is zero.

 $\sum_{pi} = \sum_{pf}$

#### QUESTION 4 (Start on a new page.)

A simple rocket system consists of two parts, A of mass 3m, and B of mass 2m, as shown in the diagram below. B is stacked on top of A.

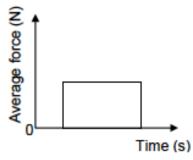

4.1 State the principle of conservation of momentum in words.

(2)

The rocket is travelling vertically upwards at a constant speed v when an internal explosion causes A to move DOWNWARDS at a speed  $\frac{1}{2}v$ .

Ignore ALL external forces on the rocket.

 Calculate the velocity of B in terms of v immediately after the internal explosion. (5) The graph below shows the average force exerted by A on B during the internal explosion as a function of time.

- 4.3 Name the physical quantity represented by the area under the graph. (1)
- 4.4 Redraw the graph in your ANSWER BOOK. On the same set of axes, sketch the graph of the average force that B exerts on A as a function of time. (2)

# QUESTION 4 (Start on a new page.)

### 4.1 What is meant by an *isolated system* in physics?

During an experiment, a rocket of unknown mass is mounted on a toy cart of mass 20 kg. The cart-rocket combination moves at a constant speed of  $2,5 \text{ m}\cdot\text{s}^{-1}$  along a horizontal floor.

At a certain instant, the rocket is fired horizontally in the direction of motion at a speed of 30 m·s<sup>-1</sup>. As a result, the cart slows down to a speed of 0,6 m·s<sup>-1</sup>, as shown in the diagram below.

Ignore frictional effects.

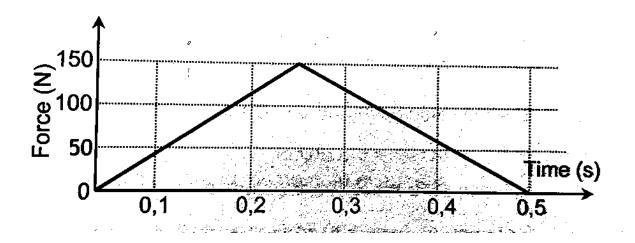

- 4.2 Use relevant physics principles to explain why the firing of the rocket will slow down the cart.
- 4.3 Calculate the mass of the rocket at the instant the rocket was fired from the toy cart.
- (5) **[9]**

(2)

(2)

# **QUESTION 8**

During a hockey game, a player hits a stationary ball, having a mass of 150 g. The graph shows how the force on the ball varies over time.

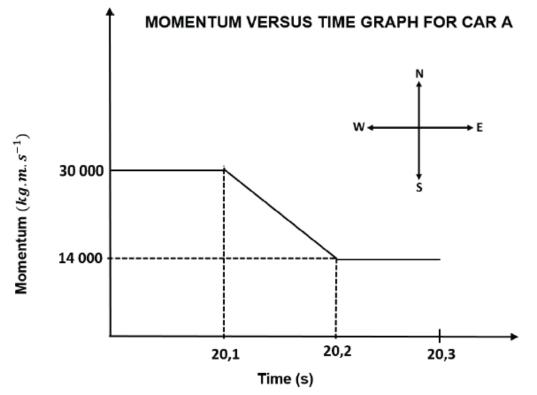

- 8.1 What is represented by the area under the graph?
- 8.2 Calculate the velocity at which the ball leaves the hockey stick.

### Question 9

The graph below shows how the momentum of car **A** changes with time *just* before and *just after* a head-on collision with car **B**.

Car A has a mass of 1 500 kg, while the mass of car B is 900 kg.

Car **B** was travelling at a constant velocity of  $15 m s^{-1}$  west before the collision. Take east as positive and consider the system as isolated.

9.1 What do you understand by the term *isolated system* as used in physics? (1) Use the information in the graph to answer the following questions.

# 9.2 Calculate the:

- 9.2.1 Magnitude of the velocity of car A just before the collision. (3)
  9.2.2 Velocity of car B just after the collision. (5)
  9.2.3 Magnitude of the net average force acting on car A during the
  - collision. (4)
